

How
emotionally
mature are
you?

Damodar Suar

E-mail: ds@hss.iitkgp.ernet.in

Dark side of the Genius

Zidane's infamous "headbutt" incident at the 2006 World Cup final. The French player hit Italy's Marco Materazzi square in the chest with his head after an insult was thrown at Zidane.

Part 1: How emotionally mature are you?

Emotional immaturity and maturity

When someone you respect, insults and humiliates you in front of others about a mistake you've made, you

- Go home and vow never to put yourself in such situation
- You get hangover about the incident
- Make a sharp comeback
- Go home and write a letter to defend your position
- Take it easy, talk with the person how you felt and also communicate to your friends

This emotional maturity is emotional intelligence (EI)?

- Emotional intelligence was developed by Salovey and Mayer (1990) and popularized by Goleman (1995) as a “competency” model. It is the ability of a person to cognitively assess emotions within oneself and recognize them in others, so as to modulate behavior (Salovey & Mayer, 1990). Simply, it is the use of emotions intelligently. EICs incorporate (a) self-awareness, (b) self-management, (c) social-awareness, and (d) relationship management (Boyatzis et al., 2000). The former two entail personal and the latter two inter-personal/social competencies.
- How it relates to IQ and age? Do emotion and cognition relate? Both are necessary allies?

Five components of EI at work (Goleman, HBR, 1998).

Perceive and identify emotions in faces, eye contact, tone of voice, and body language of others and modulate your emotion accordingly.

	Definition	Hallmarks	Examples
Self awareness	The ability to recognize and understand your moods, emotions, and drives, as well as their effect on others	Self-confidence Realistic self-assessment Self-depreciating sense of humour	Tight deadline of a manager, and plan in advance
Self-regulation	The ability to control or redirect disruptive impulses and moods The propensity to suspend judgment to think before acting	Trustworthiness and integrity Comfort with ambiguity Openness to change	when a team spoils a presentation, leader screams, considers possible reasons for failure, explain the consequences to the team, and explores solutions with them
Motivation	A passion to work for reasons that go beyond money or status A propensity to pursue goals with energy and persistence	Strong drive to achieve Optimism, even in the face of failure Organizational commitment	when company fails to implement the pay hike, HR manager based on his experience devise a new formula for the turn around
Empathy	The ability to understand the emotional makeup of other people Skill in treating people according to their emotional reactions	Expertise in building and retaining talent Cross-cultural sensitivity Service to clients and customers	Reading body language and negotiate
Social-Skill	Proficiency in managing relationships and building networks An ability to find common ground and build rapport	Effectiveness in leading change Persuasiveness Expertise in building and leading teams	When grievances are unsettled, the chief manager of the company went for a “Kholea darbar” to settle the grievances as in South-Eastern Railway Kharagpur

Test your EI

A number of statements to describe you are given below. Five responses apply to each statement that are mentioned below from strongly disagree to strongly agree. Write the numerical number of the response on the left side space to indicate how you feel on each statement.

1= Strongly disagree 2= Disagree 3= Neither disagree nor agree 4= Agree 5= Strongly agree

- ☐ I can always recognize his/her emotions and feelings.
- ☐ I can very well understand the feelings and emotions of others.
- ☐ I can control my emotions and channel them in fruitful ways.
- ☐ I always keep motivating myself/others to improve further.
- ☐ I try to understand others putting myself in their positions.

Add all the item scores. If your score is ≥ 20 , your EI is reasonably acceptable.

Part 2: Improving your EI

Emotional facilitation of thoughts

- The ability to incorporate feelings into analysis, reasoning, problem solving and decision making.
- The potential of your feelings to guide you to what is important to think about.

Emotional management

- The ability to take responsibility for one's own emotions that influences cognition
- The ability to turn negative emotions into positive learning and growing opportunities
- The whole essence is how you understand your and others' emotions and deal with that situation.

Persons with High/Low EI

- I cultivate a sense of humor.
- I get pleasure performing challenging tasks
- I am quite sensitive to how relationships go on.
- I can easily make friends.
- I put myself in others' situation/positions to understand them.

Emotional competencies

1. Intentionality
2. Creativity
3. Resilience
4. Interpersonal bond
5. Constructive discontent

Emotional values and beliefs

1. Compassion
2. Outlook
3. Intuition
4. Socialized-face of personal power
5. Integrity--Acting openly, honestly and consistently

Emotional impact

Events, pressure and satisfaction

1. Life events
2. Stressful situations
3. Work pressure
4. Personal pressure
5. Calm, composed, resilient, and satisfied

Some Common Methods for Enhancing EI

- Role model
 - Reading and practicing self-renewal-Professional renewal, social, spiritual, and physical renewal for self development, relationships management, leadership, etc.
 - Learning from life experiences, self-reflection, and thinking
 - Learning and cultivating spiritual practices
-
- Brain mechanism: A part of limbic system called the Amygdala is, in Goleman's words, "the seat of all passions," and it has been in the identification of the function of this region that scientists have begun to understand the paths that emotions take in forming. The psychological functioning can modulate the functioning of Amygdala.

Improving your emotional intelligence

Part 2: Improving your EI

- **Emotional facilitation of thoughts**
 - The ability to incorporate feelings into analysis, reasoning, problem solving and decision making.
 - The potential of your feelings to guide you to what is important to think about.
- **Emotional management**
 - The ability to take responsibility for one's own emotions that influences cognition
 - The ability to turn negative emotions into positive learning and growing opportunities
 - The whole essence is how you understand your and others' emotions and deal with that situation.

Persons with High/Low EI

- I cultivate a sense of humor.
- I get pleasure performing challenging tasks
- I am quite sensitive to how relationships go on.
- I can easily make friends.
- I put myself in others' situation/positions to understand them

- **Emotional competencies**

1. Intentionality
2. Creativity
3. Resilience
4. Interpersonal bond
5. Constructive discontent

- **Emotional values and beliefs**

1. Compassion
2. Outlook
3. Intuition
4. Socialized-face of personal power
5. Integrity--Acting openly, honestly and consistently

Emotional impact

Events, pressure and satisfaction

1. Life events
2. Stressful situations
3. Work pressure
4. Personal pressure
5. Calm, composed, resilient, and satisfied

Some Common Methods for Enhancing EI

- Role model
 - Reading and practicing self-renewal-Professional renewal, social, spiritual, and physical renewal for self development, relationships management, leadership, etc.
 - Learning from life experiences, self-reflection, and thinking
 - Learning and cultivating spiritual practices
-
- Brain mechanism: A part of limbic system called the Amygdala is, in Goleman's words, "the seat of all passions," and it has been in the identification of the function of this region that scientists have begun to understand the paths that emotions take in forming. The psychological functioning can modulate the functioning of Amygdala.

Empathy – and its relevance

Priyadarshi Patnaik

Professor

Department of Humanities & Social Sciences
Indian Institute of Technology Kharagpur

*MOOC
Soft skills
development*

Overview

- Empathy
- Why do we need empathy for soft skills
- What is empathy
- Habits to inculcate
- References

Empathetic? Quiz

- **Empathy Quiz** (Greater Good, Berkeley)
http://greatergood.berkeley.edu/quizzes/take_quiz/14

Please enter your self-assessment scores in the Discussion Forum Link provided so that we can know what is the general level of communication skills of this class.

What is empathy?

- Empathy is the experience of understanding another person's condition from their perspective. You place yourself in their shoes and feel what they are feeling. Empathy is known to increase prosocial (helping) behaviors. While American culture might be socializing people into becoming more individualistic rather than empathic, research has uncovered the existence of "mirror neurons," which react to emotions expressed by others and then reproduce them.

Psychology Today,

<https://www.psychologytoday.com/basics/empathy>

Mirroring

- Mirror positions
- Lip movements
- Experience of emotions ... contagion
- Aesthetic emotions...

Why do we need empathy?

Daniel Goleman identified five key elements of empathy:

- Understanding Others
 - (listening skills, non-verbal communication)
- Developing Others
 - (mentoring, getting feedback, motivating others)
- Having a Service Orientation
 - (help, support, customer service)
- Leveraging Diversity
 - (team building, conflict resolution)
- Awareness about people, society, culture
 - (core skill of communication)

“What is empathy,” *SkillsYouNeed*

<http://www.skillsyouneed.com/ips/empathy.html#ixzz4Cy8GAD4C>

Habits to develop

- Curiosity – inquisitiveness – explore the new (as in relations)
- Challenge stereotypes / prejudices and become inclusive
- Put yourself in another's place/shoes
- Listen, but with a difference
- From empathy to action
- Wide coverage – ambitious about empathy

Karunaa

“Six Habits of Highly Empathic People.” Roman Krznaric.
http://greatergood.berkeley.edu/article/item/six_habits_of_highly_empathic_people1

Certain key points of relevance

- Gender and empathy
- Age and empathy
- Affective empathy (feel) vs. cognitive empathy (understand)
- Sri Ramakrishna's empathy...
- Buddhism, meditation, detachment and empathy... (you may explore Indian traditions)
- Empathy and generosity...

Acknowledging emotions

- Anger
- Apathy
- Guilt and shame
- Hatred
- Fear
- Worry-anxiety
- Confusion
- Jealousy
- Sadness
- Happiness
- Contentment

*It helps us understand
ourselves better as well*

*The Art of Empathy: A complete guide to life's most
essential skill. Karla McLaren, SoundsTrue, 2013*

Let us explore empathy together

- **Grief and empathy**
- **Generosity and empathy**
- Please complete the activities and surveys so that we can together explore certain aspects of empathy in the Indian context

Intrapersonal Communication

by

Dr. Vijai N. Giri

Professor of Communication Studies

Dept. of Humanities & Social Sciences

IIT Kharagpur

email: vng@hss.iitkgp.ernet.in

The first step towards effective communication with others is successful communication with yourself.

Intrapersonal communication is not restricted to "talking to ourselves"; it also includes such activities as internal problem solving, resolution of internal conflict, planning for the future, emotional catharsis, evaluations of ourselves and others, and the relationships between ourselves and others. (Pearson & Nelson, 1989, p. 321)

All of the physiological and psychological processing of messages that happens within individuals at conscious and nonconscious levels as they attempt to understand themselves and their environment. (Roberts et al., 1987, p. 2)

The background is a solid blue color. A thin, light blue curved line starts from the left edge and curves downwards towards the bottom right. A larger, darker blue triangular shape is positioned in the bottom right corner, pointing towards the center of the slide.

**“The easiest person to
deceive is one’s own self.”**

***Intrapersonal* communication takes place whenever we evaluate and react to internal and external stimuli.**

Intrapersonal messages reflect our physical self, emotional self, social self, self-concept, values, beliefs and attitudes - in short, our entire personality. Thus, the study of *intrapersonal* communication begins with knowing ourselves.

The Physical Self

A person with a fairly healthy personality will have a fairly healthy body image.

The Emotional Self

Emotions are conscious feelings that are accompanied by physiological changes, such as rapid heartbeat, tensed muscles, or raised blood sugar level.

Self-Concept

What we think about ourselves - our self-concept - has a strong effect on intrapersonal and interpersonal communication.

Past Experiences

**Your past shapes the way
you feel about yourself and
the way you react to others.**

The Process of Intrapersonal Communication

- ❑ Internal Stimuli
- ❑ External Stimuli
- ❑ Reception

The Process of Intrapersonal Communication (Contd.)

- ☐ **Processing**
- ☐ **Transmission**
- ☐ **Feedback**

**Thus, an Individual's
intrapersonal communication
must be considered in any
analysis of interpersonal
communication situations.**

Thank You!

Change Management

Objectives:

What is change management?

Change and resistance to change

Change models

Strategic change

Damodar Suar

Department of Humanities and Social Sciences

IIT Kharagpur

E-mail: ds@hss.iitkgp.ernet.in

What is Change Management?

- “.....the only constant is change; change is inevitable”
- Organizational strategic changes are transitions or modifications from an existing state to a desired state for attaining efficiency and effectiveness.
- new machines for production, new product development, the process change, vision realization, plant modernization, strategy planning
- Major alternations in terms of process change, people change, structure change, culture change.
- Competitive advantage
- 70% of change fail, continuous change—(1) incremental and (2) radical change, **fit-for-one** rather than fit-for-all
- Change management is a systematic approach to deal with change both from the perspective of an organization and the individual/employee.

Change

- Until change is initiated organization is stable, state of equilibrium
- The of dismantling and assembling is the state of disequilibrium
- The organization will move from **equilibrium state to disequilibrium** if there is imbalance in **external** (legal, international, political, social, **technological, economic**, environmental, cultural factors) and **internal state** (**individual performance**, knowledge, values, beliefs, needs, behavior, leadership, communication, **reward system, interpersonal relations prevailed in organization**, structure, strategy, climate) and from **disequilibrium to equilibrium by adopting change management strategies** (vision realization, plant modernization, strategy planning)
- Rise in complexity and uncertainty, Organization open learning system—it can interpret and process information-- change initiative

Resistance to Change

- “The most likely response to a change proposal is a series of outraged objections, some relevant (for no proposer of change can have thought out all the implications), some irrelevant (just waiting for an opportunity to surface and using this one).’

(Pugh, D. (1993) Understanding and Managing Change, in Mabey C, and Mayon-White, B. (eds.) Managing change, second edition, PCP).

Sources of Organizational Resistance

- Threat of Existing Group Power Bases
- Threat to existing resource allocation
- Structural Built-in Inertia
- Cultural Mindset Inertia
- Entrenched Interest
- **Why Organization Resist Change**
 - Organizations are coalitions of interest groups in tension
 - balance (ultra-stability, equilibrium) of forces hammered out over a period
 - Change upsets this balance

Approaches to Manage Change

- Lewin's Theory of Change
- Kotter's Eight Step plan
- Action Research
- Organizational Development

Lewin's Change Model

Lewin's Force-Field Theory of Change

Organisational change occurs when:

- forces for change strengthen
- restraining forces lessen, or
- both processes occur simultaneously

Possible ways of dealing with resistance (Kotter & Schlesinger)

- Education & Communication
- Participation & Involvement
- Facilitation & Support
- Negotiation & Agreement
- Manipulation & Co-optation
- Explicit & Implicit coercion

Creating an Urgency for Change

- Need to motivate employees to change
- Most difficult when organisation is doing well
- Must be real, not contrived
- Customer-driven change
 - Adverse consequences for firm
 - Human element energizes employees

Proposed cyclic change management framework	Kanter et al.'s Ten commandments for executing change (1992)	Kotter's Eight-stage process for organizational transformation (1995)	Luecke's Seven steps for managing change (2003)
1. Realization of vision	Analyze the organization and its need to change		Mobilize energy and commitment through joint identification of business problems and their solutions
	Create a vision and common direction	Developing a vision and strategy	Develop a shared vision of how to organize and manage competitiveness
2. Need for a change	Separate from the past; create a sense of urgency	Establishing a sense of urgency	
4. Appropriate selection of change agents	Support a stronger leader role		Identify the leadership
	Line up political sponsorship	Creating a guiding coalition	
3. Strategic planning	Craft an implementation plan		
	Develop enabling strategies	Empowering broad-based action	
5. Consideration of change effects	Communicate, involve, and be honest	Communicating the change vision	
8. Make change institutionalized and internalize	Reinforce and institutionalize change	Anchoring new approaches in the culture	Institutionalize success through formal policies, systems, and structures
		Generating short-term wins, consolidating gains, and producing more change	
6. Execution of change			
7. Evaluation, monitoring, and keeping track			Focus on results not on activities; start change at the periphery, then let it spread to other units without pushing it from the top; monitor and adjust strategies in response to problems in the change process

Strategic change

1. Realization of vision
2. Need for change (gap between ongoing activities and desired activities for vision realization)
3. Strategic planning (every facet of business needs careful planning, resources, change facilitators, alignment of all resources needed for change)
4. Appropriate selection of change agents (personal power, caring, persuasive, influencing, go-getters)
5. Consideration of change effects (the change and its process should be communicated to all employees, the exigency of change and its effect on employees and organizations to imbibe the readiness for change)

6. Execution of change (Re-planning after responses, re-orienting strategies, resolving resistance, implementing change)
7. Evaluation, monitoring and keeping track (if change outcome is desirable, change sustains otherwise re-planning and repeat the above steps)
8. Make change institutionalize and internalize (organizational stability, employee performance, organization success indicator)

Planning, execution, and assessment.

Change management requires top-management initiative and the collaboration of all .

Thank you
