

Motivating Oneself

Damodar Suar
Department of Humanities and Social Sciences
IIT Kharagpur
E-mail: ds@hss.iitkgp.ernet.in

Motivating oneself is the self-motivation

- **In this context, we will discuss**
- **Motivation and self motivation,**
- **Self-motivational process, and**
- **Link to brain mechanism to self-motivate yourself**

- Motivation is derived from the Latin word '*movere*' which means 'to move'. Motivation relates to the force, stimulus, or influence that guides people to do the things they do. It is the call for action or behavior. It moves the self to attain pleasure and avoid pain.
- Three components of motivation: (1) Direction- what the person is trying to do; (2) effort—how hard a person doing it; (3) persistence—how long a person continues to it.
- Miloni in Italy, a sculptor incidence

Motivational Process

- **First, motivation is a psychological force that contributes to a person's degree of commitment. It includes drives and desires for goal attainment that regulate the direction, intensity, and persistence of human action.**
- **Second, desires and drives cause behavior, but they may be the result of behavior. For example, a person's desire for accomplishment may be made keener by the satisfaction gained from achieving a preferred goal or it may be dulled by failure.**
- **Third, motivation is not independent of environment. People in a business that has developed a reputation for excellence, quality, and service tend to be motivated to contribute to this reputation.**
- **Fourth, what motivates one individual may not be the same for another. As money may be the most important motivator for some people, it may be praise, recognition, and interesting nature of work for others.**
- **Fifth, motivation of each person changes from time to time even if s/he may continue to behave in the same way.**
- **Six, motivation of people is beyond the carrot and the stick. Teresa, Gandhi**
- **Lastly, motivation is in need of periodic replenishment.**

Common Features

- **Motivated people transform their lethargy to energy, desire to determination, aspiration to achievement, and non-utilization of their skill, knowledge, and attitude to the utilization of the same. They take responsibility, put efforts willingly, give their best, adhere to quality, show performance, and feel committed to the organization they serve. Contrarily, absenteeism, increased accidents, wastage of raw materials, indiscipline, violent behavior, tardiness, sloppy work habits, apathy, and errors in assembling materials, filing, and reporting are symptoms of demotivated people. Once these symptoms surface, steps can be taken through training, counseling, rewards, and other means to change the dysfunctional behavior. When employees exhibit motivated behavior, the executives can create conditions to sustain such behavior till organizational objectives are achieved.**

Theory: Content (what), Process (how)

Figure 5.3 Pyramid representing Maslow's hierarchy

Herzberg's Two-factor Theory (intrinsic)

- 
- Herzberg (1966) collected information from 200 engineers and accountants from Pittsburgh area in USA.
 - Applying 'critical incidents' technique, the respondents were asked to describe "the situations when they felt exceptionally *good* or *bad* about their jobs, either in present jobs or the jobs they have had."
 - Analysis of responses indicated that when people talked about good feelings or satisfaction, they mentioned the factors intrinsic in the job-- achievement, recognition, challenging work, responsibility, and growth or advancement. These were the factors inherent in the job that people experienced while doing the job. When people talked about bad feelings or dissatisfaction, they mentioned the factors external or extrinsic to the job. Included in these factors were (a) environmentally-mediated extrinsic job factors-- company policy and administration, working conditions, salary, personal life, status, and security, and (b) interpersonally-mediated extrinsic job factors-- relationship with supervisors, peers, and subordinates.

McClelland's Theory

- **McClelland and his associates (McClelland, 1961; McClelland & Burnham, 1995; McClelland & Winter, 1969) specified three needs of people:**
 - **(a) need for achievement,**
 - **(b) need for affiliation, and**
 - **(c) need for power.**
- **These needs are acquired and taught, therefore, can be changed. These needs vary from person to person. One might have a strong need for achievement, and another for affiliation.**
- **Fear of failure > Hope of success (reverse it)**

Process theory: Equity

$$\frac{\text{Person's outcomes}}{\text{Person's inputs}} < \frac{\text{Others' outcomes}}{\text{Others' inputs}} \text{ (inequity due to being underrewarded)}$$

$$\frac{\text{Person's outcomes}}{\text{Person's inputs}} > \frac{\text{Others' outcomes}}{\text{Others' inputs}} \text{ (inequity due to being overrewarded)}$$

A condition of equity exists, when:

$$\frac{\text{Person's outcomes}}{\text{Person's inputs}} = \frac{\text{Others' outcomes}}{\text{Others' inputs}}$$

Expectancy Theory

- In expectancy theory (Vroom, 1964), the force to act (F) in a certain way is a product of expectancy (E) and valence (V). Expectancy refers to the extent to which an individual believes that a certain action will result in a particular outcome. Expectancy can take a probability value from 0 (absolutely no belief that an outcome will follow a particular action: hard work would not result in promotion) to 1 (complete certainty that an outcome will follow a particular action: hard work would definitely result in promotion). Valence is the attractiveness of an outcome, and may take on theoretical values from +1 to –1. A person may be strongly attracted to a particular outcome, such as promotion, and may assign promotion a high positive value. Or, the person may avoid strongly the outcome such as being fired and may assign a negative valence to promotion.
- To put it simply, motivation to work is determined by (a) what people expect as rewards for their efforts, and (b) the importance or value of rewards to them.

- **Goal-setting Theory**

- **One path to performance is motivated by goal (Locke, 2000; Locke & Latham, 1990). A specific, important, and difficult but attainable goal, when accepted, leads to higher performance than a general, unimportant, and easy goal. Giving a salesperson a specific quota, a worker an exact number of units to produce, or instructing a trucker to make a fixed number of trips between Delhi and Bombay would result in outperforming their counterparts with the generalized goal of ‘do your best’. One puts more efforts to accomplish an important and harder goal than to those which entail something unimportant. Also, objective and timely feedback on how well one is progressing towards the goal increases performance than does non feedback. People perform better in accepted goal arrived at through participation than assigned goal. When people participate in setting the goal, they set a difficult goal and feel committed to act upon it than upon an assigned goal.**

Self-motivation

- Most of the researches on motivation are conducted in western countries in ‘factory-type’ organizations, where the legacy of machine metaphor dominates. Man is a cog in the wheel, is more like a robot, whose switch must be put on and off administering rewards and punishments.
- Also, dominate themes in content and process theories, developed in western culture, are that employees work harder and smarter only when they are given specific economic rewards such as hiking pay, bonus, performance-based compensation, and so on.
- The self-conscious human being is beyond this input-output calculus. We have seen instances where everything seems the same to everybody. But one person decides and invests his/her energies and efforts, while others just hang back. In the same laboratory, with the same level of education, experience, competency, and with the same infrastructure; why do few scientists surpass their colleagues? Why do some employees outperform their peers under the same operating conditions? A person’s ‘will to do the work’ will nip many of the problems in the bud. She/he will find out ways and means to accomplish the goal without pointing out ungenuine constraints, lack of resources, non cooperation of colleagues, etc. The annual calendar of Tata Steel for its employees in 1995 rightly mentioned at the top, “will to work, will to win”.

Self-motivation: : The key to success is knowing yourself.
Who am I? What are the goals of my life? Create an extraordinary life, you may have trouble in studying, business, interacting with others, getting engaged in work. Set the vision (a picture in your mind what you want?) that match with your passion. Hear the voice of inner-self, what you internally like to do (through meditation, self-reflection, visualization)? Do the SWOT analysis

“If you want to live a happy life, tie it to a goal, not to people or objects.”

-Albert Einstein

Strengths of Self 1. 2. . 10.	Weaknesses of Self 1. 2. . 10.
Opportunities in Microenvironment 1. 2. . 10.	Threats in Microenvironment 1. 2. . 10.

- Write down on a piece of paper, say if you want to be researcher.
- Using SWOT analysis, one can make a fit between one's strengths and the environmental opportunities. Also, the individual can devise strategies to overcome weaknesses and minimise threats in the microenvironment. SWOT analysis will picture one's self in periodic intervals; make one aware of facilitating and impeding forces in microenvironment; stimulate to develop new skills, knowledge, and interests; and smoothen achievement and career change.

Goal-setting for Self-motivation

- 10 **Read the success stories of leaders, executives, reformers, and others available in books, journals, internet sites, and business magazines. Set a moderately difficult, challenging, but achievable goal considering your competency in accordance with Locke's goal-setting. The set goal needs to match with your passion as in Maslow's self-actualization and to be aligned with organizational goal. If the goal is too difficult, it becomes impossible to succeed, and creates a negative attitude towards the goal. If the goal is too easy, it kills motivation to work hard. A self-set, difficult goal affects attention, effort, and persistence.**
- 10 **Break down the long-term goal into short-term goals to make each goal more specific rather than general. Remember the goal everyday. Decide the priority of goals. Set the deadline for accomplishment of each sub-goal. Try with the easiest short-term goal. Initiate actions and improve your skill, knowledge, and attitude to accomplish short-term goals successively.**
- 10 **Get the feedback based on your actions and new expertise to assess how well you are progressing towards short-term goal. With every success, reward yourself or celebrate. Continue similarly with other short-term goals till you accomplish the long-term goal (Box 5.4). This process is similar to *plan, do, check, and act*.**
- 10 **Awareness and Inspiration from well-wishers, mentors, gurus :In the great war of Kurukshetra, Arjun was gripped with despair and despondency and was reluctant to slay the noble-minded elders and his kinsmen. Sri Krishna with persuasive and fair logic made Arjun aware of his duties and inspired him. Sri Krishna mentioned: either killed in battle, you will attain heaven or being victorious, you will enjoy the earth. In either case, you will only be a gainer. Performing one's duty in war-field is the only way to salvation. Such dialogues leading to awareness and inspiration from Sri Krishna elevated Arjun to a higher plane leading to action. So can superiors and others do to transform you from inaction to action.**
- 10 **NGO : Critical awareness**

Motivation is a state that is not just psychological, but also biochemical. If you know a bit about brain circuitry and chemistry, you can use some scientific ways to sharpen your motivation.

Low dopamine levels can lead to lack of motivation, fatigue, addictive behavior, mood swings and memory loss. There are about 86 billion neurons in the human brain.

They communicate with each other via brain chemicals called neurotransmitters. Dopamine is a neurotransmitter that's a key factor in motivation, productivity, and focus. Learn how to increase dopamine naturally.

Believe in Yourself : Build your identity as a go-getter by forming mental movies of yourself feeling motivated and achieving your goals. Surround yourself with others who believe in you as well. Research shows that being told you will perform well by others releases dopamine, too. Self-efficacy

Recall Pleasant Past Experiences: A study showed that recalling and describing a positive memory of a task increases motivation in that area. Recall an excellent performance, a success in past or present.

Set a Achievable Goal: The way that the brain works is that it will naturally start to produce dopamine as you begin to get things done. If you're not very motivated, pick a tiny, easy part of the task to begin with. Dopamine is produced every time you achieve something, no matter how small it is. The brain enjoys frequent positive feedback to let it know things are progressing towards a final goal.

Creative hobbies of all kinds — knitting, quilting, sewing, drawing, photography, woodworking, and home repair — bring the brain into a meditative state. These activities increase dopamine, ward off depression, and protect against brain aging.

Listening to music can cause release of dopamine. Oddly, you don't even have to hear music to get this neurotransmitter flowing. Just the *anticipation* of listening can do that.

Use the mind : You can strengthen any circuit in the brain by simply using it more, making it easier to go that way naturally next time. If do mental work in old age, the brain centre will be continuously active.

Laugh Yourself Happy: The average child laughs 300 times per day while adults laugh a paltry five times. Laughter is the best medicine. One way laughter works to reduce pain, boost your immune system, and increase happiness is by boosting levels of endorphins. Don't really feel like laughing?

Exercise with Others : But sitting all day is unhealthy, so you should do some exercise anyway. When you exercise, do it with others. Others' performance will be the motivator for you.

Drink Coffee: Coffee is known to release dopamine into the brain, as well as having the ability to increase mental focus. Scientists have found that caffeine can enhance some cognitive tasks, such as memory functions, and spark off the motivation and reward circuit in the brain. Make sure you don't overdose on caffeine.

Eat Nutritious food you like: Catecholamines including dopamine, adrenaline and noradrenaline belong to the category of brain chemicals that are important neurotransmitters for mental energy, stimulation and motivation.

Your motivation is based on introspection and change in mindset and practicing certain activities to realize your goal in life. Thank you.

Faces are windows to human nature

BBC: Science

- Are you a good judge of character? Perhaps you think you can judge someone's personality just by looking at their face? Research shows that most of us - 90% according to one study - think we can.
- But this may not all be down to arrogance. Scientists are uncovering evidence that some personality traits may be written all over our faces.
- Now Professor Perrett is using the same techniques to investigate the connections between facial features and personality. Perrett is using the most widely accepted model of human personality: the five-factor model. This consists of:
 1. Openness to experience - creative, original, independent
 2. Conscientiousness - careful, hard-working, conscientious
 3. Extraversion - affectionate, talkative, sociable
 4. Agreeableness - forgiving, sympathetic, warm
 5. Neuroticism - nervous, worrying, highly strung

G Mohan, who has been writing steadily for the last 15 years, is now well known globally for his tender lyrics and delicate style. Nature is his central theme, especially human yearning for the beauty of nature. Heralded as a new age Keats, his soft, lyrical words and search for the beautiful in every tiny object is his special forte. Recently, two of his volumes, *Blossoms in Autumn* and *Tenderness in the Sky* were published by Penguin books.

N Jawahar is a very successful and upcoming entrepreneur who is using crowd sourcing very innovatively in order to conduct media research. His entire business centers on conducting audience research for his clients. He attributes his success to his strength of character, his determination, and his hard work.

Let us evaluate their perceived characters based on what we know about them and how they look on a five point scale

A: How open does he seem to experience (creative, original, independent)?

very much – yes – don't know – no – definitely not (5-4-3-2-1)

B: How Conscientiousness - careful, hard-working does he seem to you?

very much – yes – don't know – no – definitely not (5-4-3-2-1)

C: Extraversion - affectionate, talkative, sociable. How would you rate him on such a scale?

very much – yes – don't know – no – definitely not (5-4-3-2-1)

D: Agreeableness - forgiving, sympathetic, warm – how do you assess him?

very much – yes – don't know – no – definitely not (5-4-3-2-1)

E: Neuroticism - nervous, worrying, highly strung. Does he seem so?

very much – yes – don't know – no – definitely not (5-4-3-2-1)

Persuasion

- The child...
- Everyone in the world is probably persuaded or manipulated in some way ... except me
- I am intelligent to see through...
- But is persuasion really bad?
- What about advice?
- What about decisions? How do we take them?
- *Can I persuade you that you can be persuaded? I hope so...*

Manipulation vs. persuasions

NPTEL

The six key factors

- Reciprocation
- Social proof
- Commitment and consistency
- Liking
- Authority
- Scarcity

“Dr. Robert Cialdini and 6 principles of persuasion”

Contemporary colors of persuasion

- **Sheer number, size:** media, social network
- **They travel faster:** with a click, across the world
- **Institutionalized:** the business of and the research on persuasion
- **More subtle and devious:** luminal and subliminal, when are we not being persuaded?
- **More complex:** culture, ethnicity, media, globalization, behavior monitoring

What's persuasion?

- Elicit desired response
- Change attitude
- Make others accept
- Influence others' mental states
- a symbolic process in which communicators try to convince other people to change their attitudes or behavior regarding an issue through the transmission of a message, in an atmosphere of free choice.
- Brainwashing??

The Dynamics of Persuasion, Pearloff,
2003

Persuasion is as old as civilization

- Sophists and oratory
- Plato's criticism
- Aristotle's elaboration: ethos, pathos, logos
- Cicero and the role of emotional appeal
- Modern and contemporary research: experiments, surveys

Persuasion

1. Friend's attempt to influence another's opinion of movies
2. Loved one's antidrug appeal
3. Advertising
4. Health public service messages
5. Political campaigns
6. Sales and telemarketing

Coercion

1. Threatening messages
2. Employer's directives
3. Interrogation
4. Communication in dangerously abusive relationships
5. Ban on smoking
6. Enforcement of seat belt laws

Borderline Cases

1. Art
2. Movies
3. Music
4. Entertainment TV shows
5. News
6. Heart-rending photographs

Persuasion or coercion?

Tom works for a social service agency that receives some of its funding from United Way. At the end of each year, United Way asks employees to contribute to the charity. Tom would like to donate, but he needs every penny of his salary to support his family. One year, his boss, Anne, sends out a memo strongly urging employees to give to United Way. Anne doesn't threaten, but the implicit message is: I expect you to donate, and I'll know who did and who didn't. Tom opts to contribute money to United Way. Was he coerced or persuaded?

From
The Dynamics of Persuasion,
Pearloff, 2003

The persuasive effects of communication

- **Shaping:** “A nastier example is cigarette marketing. Tobacco companies spend millions to shape people's attitudes toward cigarettes, hoping they can entice young people to take a pleasurable, but deadly, puff.”
- **Reinforcing:** “Many persuasive communications are not designed to convert people, but to reinforce a position they already hold.”
- **Changing:** say about caste, romance and marriage, etc.

According to repeated nationwide surveys,
**More Doctors
Smoke CAMELS
than any other
cigarette!**

Negro to Black

In the English language, the word "**nigger**" is an ethnic slur, usually directed at black people. The word originated as a neutral term referring to people with black skin, as a variation of the Spanish and Portuguese noun *negro*, a descendant of the Latin adjective *Niger* ("black"). It was often used disparagingly, and by the mid-twentieth century, particularly in the United States, its usage became unambiguously pejorative, a racist insult. Accordingly, it began to disappear from popular culture

<https://en.wikipedia.org/wiki/Nigger>
Accessed on 21 November 2015

1885 illustration from Mark Twain's *Adventures of Huckleberry Finn*, captioned "Misto Bradish's nigger" (Wikipedia)

The art of persuasion II

development*

Attitudes as anchors to persuasion

- Attitudes modify perception, and attitudes mediate persuasion.
- Sometimes persuasion is about **changing attitudes**
- “Attitude is a psychological construct. It is a mental and emotional entity that inheres in, or characterizes, the person.”
- a learned predisposition to respond in a consistently favorable or unfavorable manner with respect to a given object (Fishbein & Ajzen, 1975, p. 6)
 - Attitudes are **learnt**
 - Attitudes are (emotional) **evaluations**
 - Attitudes influence thoughts and action – **decision making**
- **Values** are ideals, guiding principles in one’s life
- **Beliefs** are more specific and cognitive

Attitudes can be strong or weak

- importance (we care deeply about the issue);
- ego-involvement (the attitude is linked to core values or the self);
- extremity (the attitude deviates significantly from neutrality);
- certainty (we are convinced that our attitude is correct);
- accessibility (the attitude comes quickly to mind);
- knowledge (we are highly informed about the topic); and
- hierarchical organization (the attitude is internally consistent and embedded in an elaborate attitudinal structure).

Attitude: functions

- **Knowledge:** they help one make sense of the world
- **Utilitarian:** help get rewards and avoid punishments
- **Social adjustive:** help us adjust to reference groups
- **Social identity:** help us create them
- **Value-expressive:** represent our core values
- **Ego-defensive:** defense against unpleasant emotions

Attitude and persuasion

- Target relevant beliefs
- Locate relevant reference groups
- ...

Messages, contexts and decisions

Kate and Ben, recently married, are buying a car.

Sitting in their living room one Thursday night watching TV, they find that they are tuning in more closely to the car commercials than the sitcoms. The next day after work, at Kate's request they click onto the *Consumer Reports Web site* and print out information about compact cars.

On Saturday they brave the car dealerships, get the lowdown from car salesmen, and take spins in the cars. Kate, armed with her incredible memory for detail and ten 3 X 5 cards, hurls questions at the car salesmen, while Ben, shirt hanging out, eyes glazed, looks dreamily at the sports cars he knows he can't afford.

By early the next week, they have narrowed down the choices to a Honda Civic and a Saturn SC. Her desk covered with papers, printouts, and stacks of warranties and brochures from the dealerships, Kate is thinking at a feverish pace; she pauses, then shares her conclusions with her husband.

"Okay, this is it. The Honda gets more miles per gallon and handles great on the highway. But *Consumer Reports* gives the new Saturn better ratings on safety on account of their four-wheel antilock brakes, and traction control, which is important. The Saturn also has a better repair record than the Civic. But the big thing is we get a stronger warranty with the Saturn dealer and, Ben—the Saturn is a thousand bucks cheaper.

Soooo ... what do you think?" Ben looks up. "Well, you know, I'm not into all this technical stuff like you are. I say if the Saturn gets better ratings from *Consumer Reports*, go for it. I also think the Saturn salesman made a lot of good points—real nice guy. The Honda guy basically blew us off when he found out we couldn't get an Accord.

"There's also the other thing," says Kate, sporting a grin.

"What?"

"The name."

"It's true," says Ben a bit sheepishly. "The name Saturn is cool.

I like it."

From *The Dynamics of Persuasion*,
Pearloff, 2003.

Effects of persuasive communication

- Communicator's credibility
- Message
- Appeal
- Audience personality traits

Affect if we are persuaded or not
(Yale attitude change approach)

This doesn't always work

FIG. 5.1 The Hovland/Yale Model of Persuasion.

- Cognitive response approach to persuasion
- People's own mental reactions to messages

FIG. 5.2 The Cognitive Response Model of Persuasion.

So we should be
careful about:
What we say
How we say
In the light of
Who we talk to

Components of CRAP

- Forewarning (mental preparedness to resist)
- Distraction (when they disagree)
- Inoculation theory
- Induction theory
- Peripheral processing
- Jargon
- Central processing (cogent argument)
- Heuristic vs. critical thinking

Persuasion tips

BOX 5-4 PERSUASION TIPS

One of the nifty things about the ELM is it contains practical, as well as theoretical, suggestions. Here are several suggestions for everyday persuasion, gleaned from the model:

1. Next time you are trying to convince someone of something, ask yourself: What is central, or most critical, to my attempt to change the other's mind? What type of appeal will serve my goal best? For example, people are frequently scared of giving a public speech and assume that the most important thing is to look nice—buy fancy clothes, put on lots of makeup, and so forth. This can be an important aspect of persuasion, but it may be peripheral to the task. If you are trying to make a sale, you need compelling arguments that the purchase is in the client's interest. If you are trying to convince people to get more exercise, you must show them that exercise can help them achieve their goals.

2. By the same token, remember that something that appears peripheral to you may be of considerable importance to the person you are trying to convince (Soldat, Sinclair, & Mark, 1997). You may spend a lot of time coming up with great arguments to convince neighbors to sign a petition against McDonalds' building a new franchise near a beautiful park located down the block. But if your memo has a couple typos or your Web site containing the message is overloaded with information, people may think a lit-

From *The Dynamics of Persuasion*,
Pearloff, 2003.

tle less of you. They may jump to the conclusion that your arguments are flawed. To you, the typos or abundance of information is of much less consequence than the cogency of your arguments. And you may be right. But what is peripheral to you can be central to someone else. Put yourself in the minds of those receiving your message, and consider how they will react to what you say and how you package your message.

3. When you are on the other end of the persuasion stick and are receiving the message, ask a couple of questions. First, is this something I really care about, or is it a low-involvement issue to me? Second, can I figure out what the persuader is promoting, or is this beyond me? If it is a high-involvement issue or you can understand where the persuader is coming from, you will probably scrutinize the message carefully and make a good decision. If you decide it's a low-involvement issue or you lack knowledge on the topic, you may find yourself turning to peripheral cues or relying on mental shortcuts. You may search for the easy way to make up your mind. There is nothing wrong with this, but it can lead you to place more trust in a persuader than perhaps you should. You could get snookered as a result!

To protect yourself, always ask yourself if you're trying to go for the quick fix, either because you don't care or don't know much about the issue. If you recognize that you are relying on mental shortcuts, take the opposite tack. Spend more time than you ordinarily would on the decision. Think about the issue. You may find it's more interesting or less difficult than you thought. The extra few minutes you spend thinking may help prevent you from making a costly or embarrassing mistake.

Who says it

- Charisma
- Authority
- Credibility (expert, trustworthy, gets goodwill)
 - Knowledge bias
 - Reporting bias
- Social attractiveness
 - Likability
 - Similarity
 - Physical attractiveness

As a teacher, let me tell you this:

Your mind can be your best friend only when you control it. Let go and it will become your enemy

I never ask you not to earn wealth. Server yourself first, but then serve others.

Mahatma Gandhi, *My Experiments with Truth*

For the one who has
conquered the mind,
the mind is the best
of friends; but for one
who has failed to do
so, his very mind will
be his greatest enemy.

Bhagavad-gita 6.6,
Sri la Prabhupada

Message factors

There are three types of message factors. The first concerns the structure of the message—how it is prepared and organized. The second is the content of the communication—its appeals and arguments. The third factor is language—how communicators use words and symbols to persuade an audience

Key Message Factors

Message Structure

1. Message sidedness
2. Conclusion drawing
3. Order of presentation (primacy vs. recency)*

Message Content

1. Evidence
2. Fear
3. Framing

Language

1. Speed of speech
 2. Powerless versus powerful language
 3. Intense language
-

Message structure

- A ***one-sided*** message presents one perspective on the issue. A ***two-sided*** communication offers arguments on behalf of both the persuader's position and the opposition. Which is more persuasive?
- Example

- Two-sided messages influence attitudes more than one-sided messages, provided one very important condition is met: The message refutes opposition arguments.
- When the communication mentions, but not does demolish, an opponent's viewpoint, a two-sided message is actually less compelling than a one-sided message.
 - Enhances the credibility of the speaker
 - Convinces through reason why the opposing argument is wrong

- **Should conclusions be explicit or suggested?**
- *O'Keefe (1997) found that messages clearly or explicitly articulating an overall conclusion are more persuasive than those that omit a conclusion. As McGuire (1969) bluntly observed: "In communication, it appears, it is not sufficient to lead the horse to the water; one must also push his head underneath to get him to drink".*

- Passive smoking is a major cause of lung cancer. A husband or wife who has never smoked has an approximately 16% increased chance of contracting lung cancer if he or she lives with a smoker.
- A United Nations panel of experts on climate change has concluded that global warming is occurring at a faster rate than previously believed. The UN-sponsored panel reported that the bulk of the warming observed over the past half century is attributable to human activities.
- Herbal medicines contain tonics that strengthen the nervous system, making it more resilient to everyday stressors. Studies show that these over-the-counter herbal products offer a regular supply of the neurotransmitters needed to ward off serious physical and mental ailments.

*These diverse arguments have one thing in common: They use **evidence** to substantiate their claims.*

Fear appeal

- Hoping to deter juvenile criminals from a life of crime, a New Jersey prison adopted a novel approach in the late 1970s. Teenagers who had been arrested for crimes like robbery were carted off to Rahway State Prison to participate in a communication experiment. The teens were seated before a group of lifers, men who had been sentenced to life imprisonment for murder and armed robbery. The men, bruising, brawling criminals, intimidated the youngsters, swearing at them and threatening to hurt them. At the same time, they used obscene and intense language to scare the youngsters into changing their ways. The program, *Scared Straight*, was videotaped and broadcast on national television numerous times over the ensuing decades (Finckenauer, 1982).
- Parents use fear, from the get-go, to discourage children from approaching dangerous objects and people. They warn toddlers that they can choke and die if they put small parts of toys in their mouths. School-age kids are warned what can happen if they don't buckle up safety belts or wear bicycle helmets, or if they play with firearms.

- Not only can fear appeals fail because they arouse too little fear, they can also backfire if they scare individuals too much (Morris & Swann, 1996)
- The belief that one is less likely to experience negative life events than others is known as **unrealistic optimism or the illusion of invulnerability**.
- The illusion of invulnerability is a major barrier to fear appeals' success. If I don't believe or don't want to believe that I am susceptible to danger, then I am unlikely to accept the persuader's advice.
- A message can scare someone, but fail to change attitudes because it does not connect with the person's beliefs about the problem, or neglects to provide a solution to the difficulty that ails the individual.
- (some problem or task related to this)

Language

Powerful vs. powerless

"I know this sounds like a stupid question, but...." and proceeds to ask the professor his question. You cringe as you hear him introduce his query in this manner; you feel embarrassed for your classmate and bothered that someone is about to waste your time with a dumb question.

The student has deliberately undercut his own credibility by suggesting to the class that a query that may be perfectly intelligent is somehow less than adequate. The words preceding the question—not the question itself—have produced these effects, another example of the subtle role language plays in communication.

Hesitation forms. "Uh" and "well, you know" communicate lack of certainty or confidence.

Hedges. "Sort of," "kinda," and "I guess" are phrases that reduce the definitiveness of a persuader's assertion.

Tag questions. The communicator "tags" a declarative statement with a question, as in "That plan will cost us too much, don't you think?" A tag is "a declarative statement without the assumption that the statement will be believed by the receiver" (Bradley, 1981, p. 77).

Disclaimers. "This may sound a little out of the ordinary, but" or "I'm no expert, of course" are introductory expressions that ask the listener to show understanding or to make allowances.

Language intensity

- Language intensity includes metaphors, strong and vivid language, and emotionally charged words. It is the province of political rhetoric, social activism, hate speech, and eloquent public address.
- Persuaders in all walks of life employ **metaphor** as a technique to alter attitudes. Do they have this effect?

Metaphorical language creates greater interest in a message than does literal language, thereby increasing motivation to more systematically process the message. . . . A metaphor helps to better structure and organize the arguments of a persuasive message relative to literal language. A metaphor evokes a greater number of semantic associations, and the different arguments, when consistent with the metaphor, get connected together more coherently via the many available semantic pathways. In addition, the links to the metaphor “highlight” the arguments making them more salient. (p. 417) Pradeep Sopory and James P. Dillard (2002)

Thousands of picture packets were distributed, and television ads as well as billboards focused on the human-like features of the physical appearance of the fetus. Most Americans had no idea what a fetus looked like at any stage of development. . . . Thus, visual display and supporting scientific argument worked together to characterize the fetus as a human being. (p. 61)

From *The Dynamics of Persuasion*,
Pearloff, 2003.

Celeste Condit (1990)

Summing up: what influences persuasion

- Persona
- Credibility
- Language and communication
- Authority figure
- Desire to believe
- Familiarity
- Exclusivity and availability
- Relevance
- Curiosity
- Media – social media

Group assignment 1

- We live in a world where we spend more time on the net and with netizens than with our friends. Imagine that a move by your Institute to restrict access to internet from 10 pm to 6 am has come across strong opposition. What persuasive strategy would you develop in order to accept this.
- (Note: in the world of persuasion, there is no such thing as right or wrong, there are only attitudes, and the possibility of changing them)

Online Group Assignment 1

- Cleanliness is a major issue in Indian railways. This affects (a) trains, (b) tracks & platforms, as well as (c) railway offices.
- The Indian Railways have asked your team to develop a series of persuasive strategies in order to contain this problem. For each of the three contexts cited above, develop action plans based on (A) Attitudes of the communities being addressed, (B) who should communicate these and how, and (C) strategies for developing the messages.
- Write your responses in about 100 words each
- Upload the final responses at the following web-link:
- <http://priyadarshi1.poll daddy.com/s/assignment-1>

From Persuasion to Negotiation

by

Persuasion and Negotiation

One can't negotiate if one doesn't know how to persuade, and in many situations to persuade others, communication and relationship play an important role.

Persuasion and Negotiation

Persuading involves being able to convince others to take appropriate action. Negotiating involves being able to discuss and reach a mutually satisfactory agreement.

The Path of Negotiation

- All of us negotiate many times a day. We negotiated as children for things we wanted like, attention, special treats, and pocket money.
- We negotiate as adults for much more complex sets of desires that, when we examine them closely, often come down to the same things we negotiated for as children.

Negotiation Defined

- **“A negotiation is an interactive communication process that may take place whenever we want something from someone else or another person wants something from us.”**

Negotiation Defined

- We usually negotiate differently with those we love than we do with strangers.
- The first foundation of effective negotiation is our own style and personality as a negotiator.

Issues in Negotiation

Basically, there are four contemporary issues in negotiation:

- 1. The role of personality traits**
- 2. Gender differences in negotiation**
- 3. The effect of cultural differences in negotiating styles**
- 4. The use of third parties to help resolve differences**

Negotiating Style

- **Avoider**
- **Compromiser**
- **Accommodator**
- **Problem solver**

Foundations of Effective Negotiations

- **Determine the basic style preferences**
- **Acquire willingness to prepare**
- **Set high expectations**
- **Have patience to listen**
- **Make a commitment to personal integrity**

Goals and Expectations

- ✓ Think carefully what you really want
- ✓ Set an optimistic – but justifiable – target
- ✓ Be specific
- ✓ Write down the goal and commit to it
- ✓ Carry the goal into the negotiation

Authoritative Standards and Norms

- ❖ **Survey the applicable standards and norms. Identify the ones the other party views as legitimate.**
- ❖ **Prepare supporting data and arguments.**
- ❖ **Anticipate the arguments the other side will make.**
- ❖ **If necessary, consider making arguments before a sympathetic audience.**

Other Party's Interest

- **Locate the decision maker.**
- **How might it serve the other party's interests to help you achieve your goals?**
- **Why might the other party say "no"?**
- **What low-cost options might remove the other party's objections?**

Relationships

- ❑ Gain access and credibility through relationship networks.
- ❑ Build working relationship across the table with small steps such as gifts, favours, disclosures, or concessions.

Cont.....

Relationships

- Avoid reciprocity and relationship traps like trusting too quickly, letting others make you feel guilty, and mixing big business with personal friendships.
- Always follow the "Rule of Reciprocity":
- Be reliable and trustworthy.
- Be fair to those who are fair to you.
- When other parties treat you unfairly, let them know about it.

Leverage

- Can I gain control over something the other party needs?
- Can I commit the other party to norms that favour my result?
- Can I form a coalition to improve my position?

Negotiation Process

Step 1: Preparing Your Strategy

Step 2: Exchanging Information

Step 3: Opening and Making Concession

Step 4: Closing and Gaining Commitment

Conclusion

Negotiation is a fascinating aspect of human social life. If we treat people right, they will treat us right – at least ninety percent of the time.

If there is any one secret of success, it lies in the ability to get the other person's point of view and see things from that person's angle as well as from our own.

(contd...)

Conclusion

- ❑ We should not be so sweet that people will eat us up, nor so bitter that they will spit us out.
- ❑ Finally, the self-respect is very important. Without self-respect, one loses the will to succeed as well as the respect of others.

Thanks !

Leadership and Motivating Others

(A communication Skills Approach)

by

Dr. Vijai N. Giri

Professor of Communication Studies

Leadership

- **Leadership is the formal position where a specific person has power over others in the groups, for example, a boss in the workplace, a team leader in a task group, a chair of any committee, or an elderly person of a religious community.**
- **In fact, such people are required to communicate authoritatively, to run the agenda, and to move the group forward in a particular way that other should follow.**

Leadership styles

- The classic discussion of leadership since Bales (1950) has divided leaders into those who are focused on *task* and those who focus on the *socioemotional* well-being of the members of the group.
- More recently leaders have been regarded as team leaders (Northouse, 2009)

Leadership styles

- ***Task Leaders: A task leader***
 - ✓ stresses the activity of the group,
 - ✓ keeps members on topic,
 - ✓ follows the agenda,
 - ✓ makes sure decisions get made,
 - ✓ is responsible for defining the group's intended accomplishment,
 - ✓ is charged with directing what happens to fulfill the set tasks of the group,
 - ✓ makes sure the group reaches a conclusion at the end of its allotted meeting time,
 - ✓ summarizes what got done in a meeting, and
 - ✓ sets the agenda for the next meeting

Leadership styles

- ***Socioemotional leaders:*** A Socioemotional leader
 - pays attention to how everyone feels in the group
 - ensures that members feel comfortable with the decision-making process,
 - allows everyone to get a turn in the discussion,
 - makes member happy with the outcome,
 - keeps the personal relationships between group members,
 - manages people's face and handles their feelings

Leadership and Motivation

Someone has said:

Motivation is everything.... and the only way to motivate people is to communicate with them. It is important to talk to people in their own language. There is a language within the language.

Leadership and Motivation

- Leadership and motivation is like brother and sister. It is difficult to think of a leader who does not motivate others. Usually, people get motivated when there is a willingness to do something.
- Motivating others is an important leadership skill that will help to get people involved and empower them to accomplish the tasks.

Leadership and Motivation

- **Enthusiasm is contagious. If a leader is enthusiastic about his/her job, it's much easier to motivate others. Also, if a leader is doing a good job of taking care of him/herself, s/he will have much clearer perspective on how others can do.**
- **A great place to start learning about motivation is to start understanding our own motivations. The key to helping to motivate others is to understand what motivates them.**

Leadership and Communication

- Leadership is a communicative relationship between one person and others such that when one gives a direction and another gladly carries it out. Leadership has been successfully transacted in the interchange. Leadership is not in a *person* but *between people*.
- Effective team and their leaders are therefore interdependent. They all attend to personal relationships and carry out the friendly and respectful communication necessary for truly '*personal*' relationships. Personal communication transacts a collaborative climate, strong personal commitment, high regard for other team members, and a unified commitment to excellence.

Leadership and Motivation

- Effective leaders know how to increase employee motivation by motivating team members to *want* to do what needs to be done by effectively using following three motivational factors:
 - *Appreciation*
 - *Involvement*
 - *Awareness of personal situations*
- Though appreciation is the most powerful of the three factors, it must be used appropriately. Words of praise don't work for everyone; in fact, they can turn some people off. A leader can utilize appreciation most effectively in correlation with communication *priorities*.

Leadership and Motivational Strategies

- *A good leader always:*
- **Energizes the team** - Instead of being the type of leader who sucks the energy away from others, resolve to be the kind of leader who strives to bring passion and positive energy to the workplace every day.
- **Is a great communicator** - Leadership influences others, and this cannot be achieved without effective communication.
- **Is a great listener.** The most effective leaders are the ones who take the time to listen not just to their team members' words but to the priceless hidden meaning beneath them. Remember that during good and bad times, sometimes our employees just need someone to talk to. Communicate to them that we are always waiting with open ears to listen to them.

Leadership and Motivational Strategies

- *Is a problem solver-* “Don’t bring me problems. Please bring me solutions.” This should be the message. Then set about the task of guiding each person on your team towards the goal of becoming a top-notch problem solver during the crucial period.
- *Leads through experience and competence,* not through title or position. An effective leader mentors his/her employees, encourages them, and makes partners out of them.

Conclusion

- Thus, it can be concluded that a leader should be an effective communicator, a good listener and tries to maintain a good relationship with others. He/she must be hard working, and sincere and should have empathy for others. This is the way a leader can motivate others to get the work done or to achieve the targeted goal.

Thanks !
